Lawn Care Guide

Is your lawn looking tired? Do you want a greener, lusher looking lawn? Why not contact us now to get expert advice and a program made for your requirements. You'll be surprised at how competitive our prices are!

Grass takes up nutrients from the soil when it grows, lawn mowing removes clippings essentially removing nutrients from the soil. To keep the grass healthy, nutrients need to be applied to the soil through fertilising. To improve the effectiveness of fertilising; scarifying and aerating should be done, this allows more fertiliser to reach the soil which leads to better results, with the added benefit of allowing more air and water to penetrate the soil creating a healthier lawn.

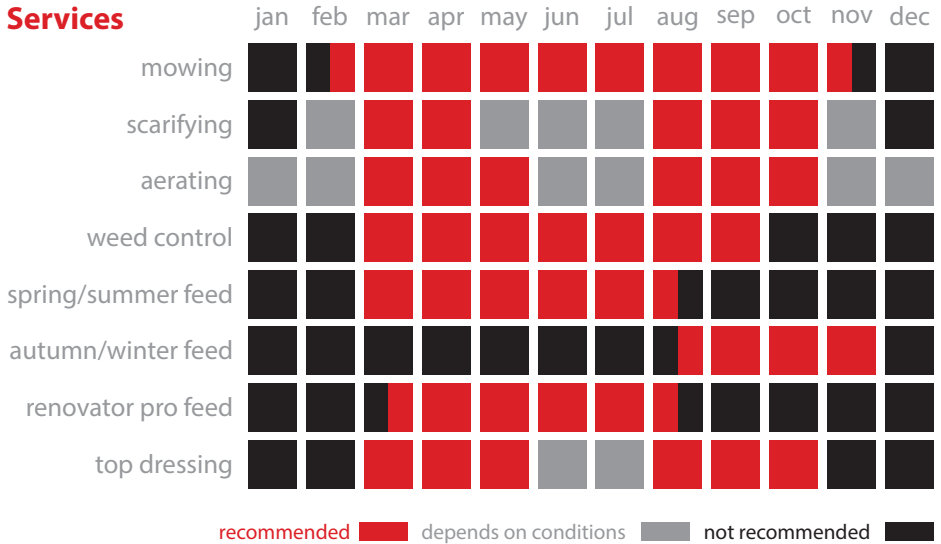

Programs

Basic Program: Regular lawn mowing and 4 lawn treatments (early spring, early summer, late summer and autumn fertilisers).

Advanced Program: Regular lawn mowing, 4 lawn treatments (early spring, early summer, late summer and autumn fertilisers) and scarifying.

Expert Program: Regular lawn mowing, 4 lawn treatments (early spring, early summer, late summer and autumn fertilisers), scarifying and aerating.

Services

Optionals

Weed control: recommended in April/May and 6 weeks later if a second application is needed for the most stubborn weeds.

Top dressing: recommended either after scarifying to aid the lawns recovery especially when mixed with seed or after aerating to help improve the soils drainage.

Wetting agents: can be applied before draught periods to significantly reduce the need for watering the lawn and keeping it healthy over this period.

Growth regulator: can be used to slow the top growth of grass and encouraging it to grow outwards creating a lawn more full and lush. Also results in less mowing or less clippings to be taken away.
